

Data Intake Processing and Verification Report

Background Information

- **Original Dataset Name:** Observations of carbon dioxide (CO₂), methane (CH₄), and carbon monoxide (CO) mole fractions from the Los Angeles Megacity Carbon Project
- **GHG Center Dataset Title:** Carbon Dioxide and Methane Concentrations from the Los Angeles Megacity Carbon Project
- **Dataset Provider:** NIST
- **Date Obtained:** December 2025
- **Location Obtained From:**
 - <https://doi.org/10.18434/mds2-3814>
- **Data Location in GHG Center:** lam-testbed-ghg-concentrations
- **Data POC(s):** Dr. Anna Karion
- **Dataset File Type(s):** CSV (.csv)
- **Projection (if different from WGS84):** N/A

Data Transfer Confirmation

An SHA-256 checksum is used to detect high-level errors within data transmissions. Results from individual checksum file comparisons of pre-transfer and post-transfer shows all files were transferred successfully and no individual files had any transfer issues.

Data Intake Process

Summary

- We are confident that the display of data in the US GHG Center accurately represents the source data
